

# Requests Module

## Presentation

Shubhi x Tanisha

May 2021

# Definition and Usage

- The requests module allows you to send HTTP requests using Python.
- The HTTP request returns a Response Object.

# Example

Example

# Source Code

```
$ git clone git://github.com/psf/requests.git
```

# Installation

pip install requests

# Methods

- `apparent_encoding`
- `content`
- `elapsed` etc

# Beloved Features

- Keep-Alive Connection Pooling
- International Domains and URLs
- HTTP(S) Proxy Support etc

# Project

Demonstrates:

Requests allows us to send HTTP requests easily. We just use the json method!
